

MaestroVision

Press Release - Sainte-Anne-de-Bellevue, September 10th, 2017

For an honest and transparent society!

The Independent Investigations Bureau (BEI) is modernizing its three interrogation rooms with MaestroVision's technology.

In a constant effort to improve its productivity, the Independent Investigations Bureau (BEI) has renewed its three interrogation rooms with the most sophisticated technology available.

« The mission of the Independent Investigations Bureau is to carry out its mission of independent investigation without the influence of the state or the police, as well as shedding light on events and disseminating all information that can be transmitted, without prejudice to investigations », according to their overall mission statement. The BEI has three fundamental values: impartiality, integrity and rigor. MaestroVision's software solutions align with these values and provide a foolproof digital audio and video recording system that will enable them to achieve their mission, aiming for the goal of an honest and transparent society.

Investing in this new 100% Quebec technology, designed and manufactured by MaestroVision, offers the possibility of indexing all notes with interrogations. This principle makes it possible to find and quickly recross a specific moment in an interrogation saving valuable time to the investigators. Moreover, this system is so simple, technicians are no longer required for an investigator to use the system.
